## Remote Assessment Report

### Satellite view of the site

**Zone 1:** 30ft area around the structure

*Typed information by the SME regarding the X - trees to be removed including the location of the trees*  
*Typed information by the SME regarding the O - trees to be kept including the location of the trees*

**Zone 2:** 100ft area around the structure

*Typed information by the SME regarding the X - trees to be removed including the location of the trees*  
*Typed information by the SME regarding the O - trees to be kept including the location of the trees.*

*\* Please consult ground proof assessment consultant for detailed recommendation*

## Ground proof Assessment Report

Structure Assessment			
Vegetation			
Inspected variables		Site findings	Recommendation
Vegetation free area around 5ft from structure		Rose plants branches and lavenders are found 3ft away from the structure at the left side of the backyard	5ft area around the structure should be clear
Combustible substance			
Presence of Combustible Substance 30ft. area around the structure	Logs/ firewood pile	Exposed firewood beside the store	*/There should not be any 30ft area around  */Propane (LPG) tanks should be kept have 10ft away from vegetation
	Scrape	Scrape of rubber tires found beside the outdoor barbeque area	
	Flammable debris	None	
	Propane cylinder	Found	
	Wildgrass longer than 6"	*The length of grass is 5" high from the surface	
	Presence of low limbed conifer	Few branches of conifer tree in southwest of the structure are 5ft high from the ground	
Presence of Combustible Material on the structure		Not found	Structure should not made of or should be cleared from all types of combustible material
Deposits of leaves and pine needle on:	Gutters	Clear	Gutter, porch, roof-line and should be completely clear from the from the pine needle and leaves
	Porch	Clear	
	Roofline	Lots of pine needles found at the back of the side on the roof-line	
	Deck	Dry leaves found	
Screening			
Screen protection	Attic	Screen missing and there is a nest of the birds	There should be screens on attics, roofs and soffits and foundation vent (1/8 inch metal screening)
	Chimney	Screen Covered	
	Soffit vent	Front soffit vent is broken	
	Foundation vent	Screen covered	

Space Assessment Zone1			
<b>Vegetation</b>			
No. of trees	4	Conifer free zone	
Density of trees	medium		
Distance of trees from the structure	5ft apart from the kitchen		
<b>Arrangement of trees</b>	<b>Clustered</b> Cluster size=2	Scattered apart by 10ft. recommended no conifer zone	
Location(directions)	(list of all trees found in all dimensions )		
Photograph	<b>Photographic description</b> Two lemon trees located aligned in north western direction may have a chance of becoming ladder fuel		
SME site findings zone 1	Comments of the SME regarding vegetation arrangement, number and the location of the trees		
<b>Space Assessment Zone 2</b>			
<b>Vegetation</b>			
Neighborhood growth of vegetation security threats	defensible space does not extend onto a neighboring property	Linking Your Defensible Space with Neighbors For wildfire protection since	
	low limbed conifers		
No. of trees	(count) exp. 15		
Density of trees	high		
<b>Arrangement</b>	<b>Continues</b>	Clumps of 2 to 3 trees can make the space defensible	
<b>Space among the trees</b>	<b>Trees are scattered by Less than 10ft distance in different directions</b>	Space should be >=20-30ft	
<b>Size of clump</b>	<b>4</b>	Size of the clump should be 2 to 3 trees	
Ladder fuel	Branches of 6 trees are 4ft high from the surface in different direction	The branches of trees should be above 6ft high from the surface	
photograph from the site	SME comments about site		
<b>Topography</b>			
Aspects	East	North-east	<p>The defensible space form the structure till zone-2 needs to be increased in case of steep slope</p> <p>Incorporate artificial barriers to improve resistance frim fire</p>
	West		
	North		
	South		
	Northeast		
	Northwest		
	Southeast		
	Southwest		
<b>Slope</b>	<b>Leveled</b>	<b>Medium Steep inclined</b>	
	<b>Medium steep inclined</b>		
	<b>Steep inclined</b>		
Types of barriers	Rock	Big rocks	

	Stream		
	Road		
	Pond		
	Open meadow		
Site specific observations zone-2		SME observations

## Mitigation Factors Report

### Structure Assessment Findings

#### Vegetation

Inspected variables	Site Findings	Recommendation
Vegetation free area around 5ft from structure	Rose plants branches and lavenders are found 3ft away from the structure at the left side of the backyard	5ft area around the structure should be clear

#### Combustible Substance

Presence of Combustible Substance 30ft. area around the structure	Logs/ firewood pile	Exposed firewood beside the store	*/There should not be any 30ft area around */Propane (LPG) tanks should be kept have 10ft away from vegetation
	Scrape	Scrape of rubber tires found beside the outdoor barbeque area	
	Propane cylinder	Found	
	Wildgrass longer than 6"	*The length of grass is 5" high from the surface	
	Presence of low limbed conifer	Few branches of conifer tree in southwest of the structure are 5ft high from the ground	
Deposits of leaves and pine needle on:	Roofline	Lots of pine needles found at the back of the side on the roof-line	Gutter, porch, roof-line and deck should be completely clear from the from the pine needle and leaves
	Deck	Dry leaves found	

#### Screening

Screen protection	Attic	Screen missing and there is a nest of the birds	There should be screens on attics, roofs and soffits and foundation vent (1/8 inch metal screening)
	Soffit vent	Front soffit vent is broken	

### Space Assessment Findings Zone1

#### Vegetation

Arrangement of trees	Clustered	Cluster size>4	Scattered apart by 10ft.
----------------------	-----------	----------------	--------------------------

### Space Assessment Findings Zone-2

#### Vegetation

Arrangement	Continues	Clumps of 2 to 3 trees can make the space defensible
Space among the trees	Trees are scattered by Less than 10ft distance in different directions	Space should be >=20-30ft
Size of clump	4	Size of the clump should be 2 to 3 trees
Topography		
Slope	Medium	<p>The defensible space form the structure till zone-2 needs to be increased in case of steep slope</p> <p>Incorporate artificial barriers to improve resistance frim fire</p>
